

Dr. Fuhrman®

PRODUCT FACTS

IMMUNE BIOTECT

Immune Biotect is a unique balance of berries, herbs and nine mushroom concentrates designed to support several different aspects of immune function.

IMMUNE FUNCTION SUPPORT

Immune Biotect is a unique blend of berries, herbs and nine mushroom concentrates designed to support several different aspects of immune function. Anyone looking for an immune system boost should consider taking Immune Biotect.

ELDERBERRY EXTRACT

Elderberry, or *Sambucus nigra*, shrubs grow in Europe and North America, and their dark purple berries are especially rich in anthocyanins. Anthocyanins are the flavonoid antioxidant molecules that produce the black, red, purple, and blue colors in several different berries, cherries, eggplant, and other deeply colored plant foods. Immune Biotect also includes extracts of blueberry, raspberry, and goji berry.

ASTRAGALUS ROOT

Astragalus membranaceus is a legume native to Asia. The dried root of the plant, rich in flavonoids and polysaccharides, is utilized in Immune Biotect.

MUSHROOM CONCENTRATES

Immune Biotect includes a carefully selected combination of nine whole, dried mushrooms: Maitake, Reishi, Himematsutake, Cordyceps sinensis, Turkey Tail, Shiitake, Lion's Mane, Meshimakobu and Chaga. Since very few of these mushrooms are readily available to include in one's day-to-day diet, Immune Biotect was formulated to provide extra mushroom phytochemicals to supplement a healthful diet. The dried mushrooms are laboratory grown and organic, and additional beta-glucan (a mushroom polysaccharide) is also included.

A Nutritarian diet rich in G-BOMBS™ (Greens, Beans, Onions, Mushrooms, Berries and Seeds) provides a wealth of immune-supporting phytochemicals. Immune Biotect was designed to provide additional immune-strengthening substances, with ingredients not typically in one's diet.*

Dr. Fuhrman explains: A health-promoting diet, rich in G-BOMBS™ (Greens, Beans, Onions, Mushrooms, Berries and Seeds) provides a wealth of immune-supporting phytochemicals and antioxidants. Immune Biotect was designed to provide an additional immune system boost, on top of those healthful foods, from immune-supporting plants not usually included in the diet. This unique formula combines berries, herbs and nine different types of mushrooms to support several different aspects of immune function.

IMMUNE BIOTECT

Product Features

- 100% vegan
- A carefully selected combination of nine mushroom species supports many normal functions of immune cells. The dried organic mushrooms in Immune Biotect are laboratory grown, and their growth conditions have been optimized for maximum production of beta-glucans and other polysaccharides, the mushroom components thought to promote healthy immunity.*
- The deep purple elderberry fruit provides a high concentration of flavonoid antioxidants for a healthy immune response.* Blueberry, raspberry and goji berry extracts provide additional flavonoid antioxidants.* Astragalus root provides additional antioxidant protection and immune-building phytochemicals.*
- Capsules can be twisted open and added to food or drink if desired.
- Free of gluten, dairy, and soy

Elderberry, or *Sambucus nigra*, shrubs grow in Europe and North America, and their dark purple berries are especially rich in anthocyanins.
